

PentraVan[®] Cream Base

Fagron's enduring transdermal vanishing cream

PentraVan[®] Cream Base is an oil-in-water emulsion with a liposomal matrix that uses the same penetration enhancing ingredients as PLO gel, which enable it to establish a greater rate and extent of absorption of the drug than other transdermal bases. Besides that, PentraVan[®] Cream Base is a true vanishing cream, leaving no sticky residue and providing a cosmetically elegant skin feel. Therefore, there is no need to cover the area of application to prevent transferring of the cream and to ensure effectiveness of therapy. It is preserved and fragrance-free.

Benefits of PentraVan[®] Cream Base

- Ready-to-use
- Simple three-step compounding process
- Allows for individualized therapy and more accurate dosing
- Compatible with broad range of APIs
- Time-saving; no need to weigh and mix multiple ingredients
- Elegant skin feel. Non-greasy, vanishing quickly.

Pentravan[®] Cream Base
